Local price	bathrooms	Area in sq ft	Living area sq ft	garages	rooms	bedrooms	age of construction	type	type 2	fireplace	Selling price

A dataset including some variables about property proporties ;)
The variables in this dataset are more self explanatory than e.g. the darknet one
The prices are in 100 thousands and the area is in sq feet
Most of us don't really think in square feet so I suggest you convert this var to sq feet.

If you feel like it and you have done some stats courses, you could even see whether it makes sense to predict the price ?
